

# ABOUT CRISP CLOUD SOLUTION

Crisp Systems is one of India's largest service provider of industrial solution, training, and consultancy. Started out as a small team of Engineers in 1996, Crisp System has 8 branches in India. Our customers range from first-time entrepreneurs, big industries, Institutes & Students. Crisp Systems has on-the-field experience of over 20 years in creating end-to-end industrial solutions in the hardware and software space.

Crisp Cloud Solutions is an arm of Crisp Systems. The core of Crisp Cloud Solutions is devising and designing products based on IoT and Cloud. Crisp Cloud Solutions has practical experience in IoT, Embedded Systems, and Cloud solutions, and has done various projects on the field over the years. Crisp Cloud Solutions also has offshoring capability in the field of big data, mobile development, quality testing, and web development.

The products of Crisp Cloud Solutions empower the users to finish a task with minimal ability and resource. We offer products for efficient agriculture, home automation, and for entertainment on the go. Our services range from IoT solutions to Embedded Solutions, to the development of customised electronics manufacturing and web/mobile development.

(End to end solution provider in IoT space)

## IoT Solutions

The IoT or the Internet of Things has become ubiquitous. From homes to office space, IoT is being embraced everywhere across the world. IoT is making the world grow smarter than ever before. However, the full potential of IoT can be gauged by business only by understanding the value it could provide by overcoming challenges.

The innovative IoT Solutions provided by Crisp Cloud Solutions facilitates businesses to transform effortlessly, and let's them outgrow their competition. From integrating the right sensors and deriving inspired insights to choosing the best-fit platform, IoT Solutions from Crisp generates value and growth to the business.

The end-to-end solutions provided by us empowers smart industries, smart living, and smart enterprises. By connecting assets, operations, and services, our IoT solutions delivers seamless connected experience. Crisp Cloud Solutions is one of the very few players in the market that has high expertise in all areas of IoT adoption, and our clients receive end-to-end solutions from a single vendor with maximum potential and expertise in the field.

### OUR IOT SOLUTIONS HELP OUR CUSTOMERS IN THE FOLLOWING WAYS:

- ➔ Competence to connect and scale efficiently
- ➔ Consolidate the business processes and transform
- ➔ Design, develop, integrate, and expand with end-to-end IoT processes
- ➔ Seamlessly incorporate IoT solutions with existing enterprise architecture.
- ➔ Process, Analyze, and Act on data
- ➔ Improved decision making

## Embedded Solution

Embedded Systems, has become an integral part of our day-to-day lives. Its being widely adopted in industries ranging from Power, Automobiles, Healthcare, etc. Moreover, embedded systems gratify consumer needs such as electronic appliances, transportation, communication, mobility and so on.

Crisp Cloud Solutions understand the importance and adoption of embedded systems for efficient work. We provide end-to-end 'Chip to Cloud' solutions with our diverse knowledge pools and hands on experience to all industries.

### DESIGN AND DEVELOPMENT

Crisp Cloud Solutions has worked on projects that include conceptualization, schematic design, PCB design, embedded programming, EMI/RMI design considerations, etc. Crisp Cloud Solutions realizes that custom development is a contained requirement for any solution in embedded systems. This forms the determination that provides our customers an apt solution to their problem.

### INTEGRATION

Integrating and consolidating multiple instruments or systems, becomes a threat with lack of domain knowledge, availability of team and resources etc. Crisp Cloud Solutions has a team of experts who offer dynamic solutions for system integration. This integration using definitive as well as proprietary communication protocols, adds value to customers' business.

### TECHNOLOGIES AND PROCESSES

Crisp Cloud Solutions supports all processor technologies, bus architectures, communication protocols, wireless communication technologies, operating systems and frameworks, PC based applications and tools. Crisp Cloud Solutions constantly invests in its team to hone their skills, so that it stays aligned with the latest technological developments. Embedded and software development processes are malleable as well as controlled thus helping us accommodate any process model as well as tailoring them to the customer needs.

## ELECTRONIC MANUFACTURING SERVICES

Crisp Cloud Solutions provides off-shore electronic manufacturing services, providing a complete and cost-effective solution for all your electronic manufacturing requirements. We are a team of experts, who have hands-on experience of working in the electronic field for more than 20 years.

This places us in a unique position, being able to clearly understand the requirement of your business, and then to design solutions that meet your specification. We improve the design and construction of each project by taking-in factors such as performance, redundancy and reliability, and leaving out potential weakness, complexity and cost.
